

M1 Transmitter

M1 Receiver

1. Power on both M1 Transmitter (blue label) & M1 Receiver (red label) by holding the button down for 3 seconds. Flashing blue means you need to pair the devices.
2. Press and release pairing button on each (you have 10 seconds between). The blue lights will turn solid when they are paired.
3. Use the short cable to connect your guitar to the M1 Transmitter, and the longer cable from M1 receiver to your amp or pedal board.
4. Play!

What's Included:

- 1 – M1 Transmitter
- 1 – M1 Receiver
- 1 - Dual USB charger
- 2 - USB charging cables
- 1 - Short guitar cable
- 1 - Long amp cable
- 1 - Holster for the M1 Transmitter

WARNING:

- No user serviceable parts inside.
- Each unit is powered by Lithium-Ion Rechargeable Battery.
- Do not open, crush, modify, disassemble, heat above 140°F (60°C), or incinerate.
- Improper handling could cause batteries to explode or release toxic materials, creating risk of fire or burns.

Tips & Hints:

- **Charging:** The Dual USB Charger will charge both devices at the same time, from zero to full charge in about 2½ hours. Fully charged M1 will give you up to 20 hours of use on the Receiver and up to 8 hours on the Transmitter. M1 units charge fast and 15-30 minutes of charge gets you enough time to make it thru the gig.
- **Range:** M1 range varies depending on the environmental conditions like weather, terrain and buildings. Players have gotten as much as 500 feet range. M1 automatically finds the most interference-free channel, but for best results keep the M1 away from electronics like your phone or other electronics that may cause interference.
- **Placement:** Because some amps are poorly shielded, we recommend keeping the M1 Receiver away from the amp's input. If you hear noise, move the M1 a foot or so and it will go away. If you are using the M1 with a pedal board, keep the M1 Receiver on the edge of your pedalboard.
- **Power Saving Mode:** If you are not playing, M1 Transmitter will go into sleep mode to save power. It wakes up the moment you start playing.
- Do not place your M1 Transmitter over your pick up. Some people like to do this for some crazy reason, but it will produce feedback.
